SUMMARY

Full Stack Software Engineer with 4+ years designing and building scalable, secure, cloud-native applications in production environments with global traffic. Strong background in Java, Spring Boot, React, Angular, and AWS, delivering secure microservices with Spring Security/JWT and AI-powered applications across healthcare, telecom, and fintech clients. Comfortable owning features end-to-end from design through deployment, monitoring, and production on-call support. **US work authorized · No sponsorship required.**

EXPERIENCE

Ernst & Young – Associate Consultant (Software Engineer)

Sept 2023 – Jan 2026

- Architected and delivered 20+ RESTful APIs using Java 21+ and Spring Boot for Alcon, a global leader in eye care serving 140+ countries.
- Implemented custom Spring Security filters with multi-layered JWT authentication, reducing API response times by 30%.
- Traced a critical production outage affecting thousands of concurrent users using AWS CloudWatch and Lambda, applied an urgent hotfix alongside an 8-engineer cross-functional team, and restored failure detection and error logging.
- Redesigned PostgreSQL and DynamoDB schemas and maintained architecture diagrams for high-concurrency workloads, reducing query latency by 20%; introduced Redis caching on its own initiative to further improve throughput.
- Worked rotational on-call assignment after production for 3+ months, monitoring AWS logs and gathering cross-team requirements to keep incident response fast.
- Built a multilingual, pixel-perfect cross-platform mobile app (Angular, Ionic, Capacitor, Cordova; Android Studio, XCode) for a telecom provider with 15M+ users, shipping payment gateways, biometric auth, and fault-tolerant error flows.
- Led an internal commerce AI application for a client POC, pairing Angular 19 and Python to integrate OpenAI and DALL·E for conversational chat and image generation; earned the Achiever Extraordinaire Award for the initiative.
- Standardized enterprise UI by developing 5+ reusable Thymeleaf components adopted across 3+ product teams, and pushed SonarQube test coverage from 30% to 80%+ using JUnit 5 and Mockito.
- Served as a key technical point of contact for cross-timezone releases and production support, resolving Git conflicts and managing Agile sprint priorities.

SentientGeeks – Junior Software Engineer

July 2022 – July 2023

- Led an offline-resilient desktop productivity application (Angular, Electron.js, Node.js, MySQL) used company-wide, integrating JIRA APIs to automate time tracking and reduce manual logging.
- Implemented background sync for offline data persistence, plus cross-platform release pipelines via Electron Builder and Docker.
- Developed a high-performance Angular application for an insurance client, integrating RESTful APIs to improve data efficiency and deliver 15% faster load times.

Xelpmoc Design and Tech – Junior Software Engineer

Aug 2021 – Jun 2022

- Engineered the end-to-end, pixel-perfect frontend of a school management platform (React, Next.js) serving multiple schools and thousands of students; built 10+ reusable responsive components and implemented lazy loading to improve initial page load by 35%, delivering consistent UX across 4+ user roles and device types.
- Contributed to Catalyst.ai, an Angular application for a biotech company, collaborating with designers and product managers to enhance UI and application functionality, improving client satisfaction.

TECHNICAL SKILLS

- Languages:** Java, TypeScript, JavaScript, Python, SQL, NoSQL, Electron.js
- Full-Stack Development:** Spring Boot, React, Angular, REST APIs, Microservices, API Integration
- Cloud & Infrastructure:** AWS, Azure, Docker, Kubernetes, Azure DevOps, CloudWatch, CI/CD
- Database:** PostgreSQL, DynamoDB, MySQL, Azure SQL, Redis
- Testing & Documentation:** JUnit 5, Mockito, Jasmine, Karma, Integration Testing, SonarQube, Confluence
- AI Integration:** OpenAI API, NVIDIA Nemotron LLM API, Prompt Engineering, LLM Integration, Claude CLI, LangChain4j
- Tools:** Git, BitBucket, Jira, Postman, Swagger, IntelliJ, VS Code, PowerShell, XCode, Android Studio

EDUCATION

Maulana Abul Kalam Azad University of Technology (MAKAUT)

August 2020

Bachelor of Technology in Computer Science and Engineering

PROJECTS

- Portfolio (github.com/Ifaquadar/ifa-quadar-portfolio) — Designed and built a personal portfolio site from scratch using Angular 19, showcasing projects, resume, and technical profile; deployed on Netlify, averaging 10+ daily visitors.
- Application Tracking System (github.com/Ifaquadar/tracking-application) — Built a full-stack, AI-powered job tracking platform using Spring Boot and PostgreSQL, using Claude CLI to accelerate development. Designed REST APIs with Spring Data JPA and Spring Security, and integrated NVIDIA's Nemotron LLM via Spring WebFlux (WebClient) for AI-assisted application summarization.
